

Körner KvK pickling system

First-time exhibitor Körner KvK presented its KvK pickling system to a wide range of visitors at FABTECH, winning orders from the USA, Canada and Venezuela during the show, reports the company.

With more than 25 years field experience in all types of pickling activities, Körner offers the most advanced pickling systems for the tube and galvanising industry.

Managing director Franz Wurm told *Tube International* that his message to FABTECH visitors was: "Pickling is not just a secondary process in a modern tube plant. It is a key process with rising technical requirements, growing environmental regulations and a strong potential for rationalisation."

Mr Wurm added that Körner would continue to build up its presence in North America, targeting the tube and galvanising industry.
